ONLINE COURSE: June 6 - August 15, 2011

NRES 472 Environmental Psychology challenges students to learn about this multi-disciplinary field. Environmental Psychology applies the methods, theories, and principles of psychology to the understanding of the human-environment relationship. Students will learn about psychological theories and social science history that will allow us to examine and provide solutions to important environmental problems. We will use the frameworks of cognitive psychology, behaviorism, social psychology, and interpersonal psychology. This course will include both lecture and discussion components delivered using online teaching technologies. There are no prerequisites for this class.
